Automatic identification of both user and card	Provides instant identification and security
User authentication with password and/or PIN	Provides additional security
Local support at terminal and administration of Smart Cards	Full solution makes deployment quick and easy for administrator
Winterm Smart Card Manager Software	
Intuitive menu and interface	Easy navigation and simplicity for administrator
Manage Smart Cards at multiple levels - local user, sessions/domain	Gives administrators flexibility to choose configuration that best suits their needs
Program local username and/or password or PIN	Scalability and easy administration
Multiple session capabilities	Allows administrator to program multiple Smart Cards simultaneously
Identify lost cards	Quick and easy administration of Smart Card assets

Wyse® Winterm™ thin clients are a simpler and easier way to deliver the productivity and application flexibility of a PC without the PC downsides of high service costs, low reliability, and short product life. Because thin clients are designed with no moving parts that can break down or lose data, they deliver greater data security and virus resistance, and nine times the reliability of a PC. They are quiet, easy-to-deploy, and simple to manage remotely.

The Winterm Local Smart Card Add-On software for Windows CE-based Winterm 3000 Series terminals allows end users a quick and easy way to logon to their thin clients - and offers administrators an even more secure thin-client environment. The add-on software, coupled with the Winterm Smart Card Manager software, allows administrators to add a local Smart Card to any Winterm 3000 Series thin client in their environment.¹

With the use of a local Smart Card, users can automatically launch their RDP or ICA sessions without the need to enter their logon multiple times, saving time and increasing productivity. The Winterm Local Smart Card solution is the most cost-effective and easy to implement in the industry, and is excellent for environments where security and speed are a must - including healthcare, kiosks, and Point of Sale.

Winterm 3000 Series customers must have firmware version 3.5.1 (service pack 2) or later to take advantage of this add-on software.

Specifications

Products Supported by Smart Card Add-On Software

- Winterm 3200LE
- Winterm 3230LE
- Winterm 3360SE
- Winterm 3630LE
- Winterm 3730LE

Installing the Winterm Local Smart Card Add-On Software

Installing the Add-On Software can be done using either:

- Wyse Rapport administrative software;
- WyseWorks Remote Administrator; or
- DHCP pull

How the Winterm Local Smart Card Add-On Software

- Insert the card into the reader
- If the administrator wants instant log-on and ICA/RDP launch, simply fill out the username and password domain for the user for each card and terminal

Installing the Winterm Smart Card Manager Software

Simply install the Smart Card Manager software on your Windows 2000 desktop or Windows 2000 Server.

How the Winterm Smart Card Manager Software Works

- Program the local username and password for the Winterm device
- Select either a user within the local domain or manually add users to the program
